

Does having our product database in multiple availability zones hurt read/write speed? -- No, only the standby is synching as the primary reads/writes the others are asynchronously following along at their own pace

What is the burstable setting?

burstable - handles heavy traffic better and doesn't let too many responses crash your database

What should you use for the Public access setting?

Public access [Info](#)

Yes

RDS assigns a public IP address to the database. Amazon EC2 instances and other resources outside of the VPC can connect to your database. Resources inside the VPC can also connect to the database. Choose one or more VPC security groups that specify which resources can connect to the database.

No

RDS doesn't assign a public IP address to the database. Only Amazon EC2 instances and other resources inside the VPC can connect to your database. Choose one or more VPC security groups that specify which resources can connect to the database.

Yes, if you want to connect from your mysql workbench

No, if you want to connect to the db only privately from your ec2
